

Leuprolide Trigger

The entire contents of the syringe will provide the specific dose ordered by your physician . Your physician will have ordered one of the following doses; 4mg (0.8ml in the syringe), or 2mg (0.4ml in the syringe). The dose is shipped with a special cap that must be removed before injection. The cap must be removed and 27 Gauge ½ inch needle attached prior to injection. The needle will be labeled separately. (please note if you are using Menopur, the needle maybe included with the Menopur needles.)

Fig. 1

Fig. 2

1. Remove pre filled syringe from box and plastic bag that it was shipped in.
2. Remove the green and white cap. It will twist off like the needles twist on.
3. Attach a 27 gauge ½ inch needle to syringe. See fig. 2
4. Inject entire contents of syringe subcutaneously when directed by your physician.
